GENERAL DESCRIPTION

LESCO Conform optimizes the performance of pesticide spray solutions by adjusting the pH to reduce the effects of alkaline hydrolysis - a chemical process that breaks down and reduces the efficacy of the active ingredients.

Generally, insecticides are more susceptible to alkaline hydrolysis than fungicides and herbicides. As with all pesticide applications, always refer to the manufacturer's product label in order to determine the proper mixing procedures and spray application methods, including the desired pH of the spray solution.

LESCO Conform contains a pH modifying agent and a nonionic surface active component to complement the buffering activity of the spray solution adjuvant.

DIRECTIONS FOR USE

FOLLOW ALL PESTICIDE LABEL DIRECTIONS CONCERNING THE ADDITION AND MIXING OF ADJUVANTS IN THE SPRAY SOLUTION.

Visually inspect the tank and all equipment to ensure the sprayer is thoroughly clean and free of any chemical residues that may negatively influence the efficacy and performance of the planned spray solution.

Fill the spray tank 1/2 to 2/3 full of clean water. With the agitator running, add **LESCO Conform** first to the tank before other adjuvants to buffer the solution to the desired pH.

APPLICATION RATES

Determine the desired pH level for the spray solution from the manufacturer's pesticide label. Check the solution pH with a pH meter.

Use the chart to the right to determine the amount of **LESCO Conform** to add to the spray solution to achieve a pH level of 5.0-6.0.

Starting pH	Amount of Conform to add to 100 gals
Greater than 8	16 oz
7 to 8	8 oz
6 to 7	4 oz
